

## **Update Rehema Sulle - January 2020**

“In November 2019 I finished my studies and I am grateful for all the support I got along the way. I studied midwifery so as to help women in labour and prevent maternal deaths. I would like to pursue my dream to improve maternal health in Tanzania.

I thank iSTEPup and hope to identify a new potential candidate with the motivation but without sufficient money to study in my country.

Our country is in need of more locally educated health workers who can make a longterm change.”
