

## **Study progress**

*Current study year or semester: 2026 (Semester one)*

*Total study years or semesters: three years (3)*

*Expected year of graduation: 2028*

My guardians have managed to solve all the challenges in my studying progress.

Dear iSTEPup Team,

May I take this opportunity to thank iSTEPup team for your support in paying my school fees and I am very committed with the opportunity you have given me to study and I shall make sure I achieve my first step of becoming a doctor.

This was my first time and my first semester sitting for my studies in health collage it gave me little challenge to adapt the environment and the studies in general since everything was new to me. The teachers asked us to go for rotations in different hospitals and departments after the studying sessions, rotations helped us to gain new knowledge and learn more about the function and responsibilities of the clinical officers, we also gain experience on how to apply the knowledge we learn from class into reality.

We had a lot of time to cooperate with the health care providers this helps us to gain experience on how to be committed in helping patients.

We have sat for the end of semester one from 17<sup>th</sup> march 2026 to 27<sup>th</sup> march 2026, and we expect to receive the results on 1<sup>st</sup> April, 2026, I shall submit as soon as I receive them.
